

FOUR SEASON HOTEL ABU DHABI

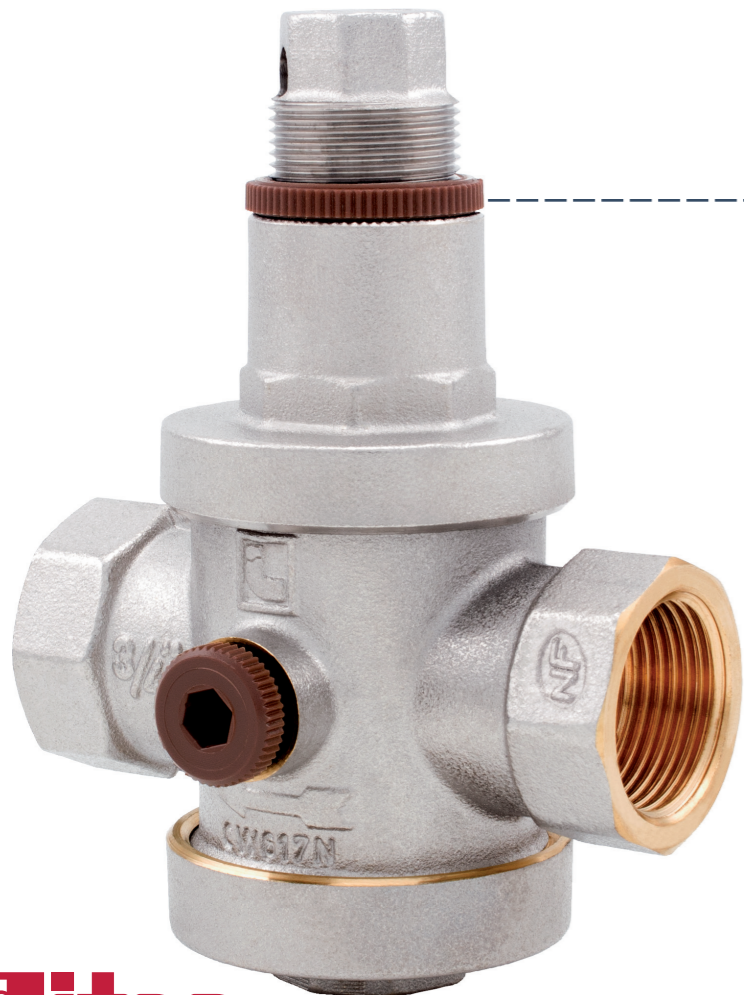

In a vibrant urban community right on the water, Four Seasons Hotel Abu Dhabi at Al Maryah Island welcomes you with bright, open spaces embracing expansive views of the city skyline and the sparkling waves of the Arabian Gulf.

In this magnificent building there is also the footprint of ITAP: our Pressure Reducers, Art. 143, have been installed to complete the systems.

Quality, safety and excellent service: the strengths of Itap. This is why our products are chosen and installed in luxurious and avant-garde buildings around the world!

PRESSURE REDUCER

The pressure reducer is a component that has a double purpose: to reduce the inlet pressure to a sanitary system and stabilize the pressure value itself.

Thanks to the regulation spring and the internal brass diaphragm, it is able to lower the inlet pressure up to values that cannot cause damage to the accessories (taps, valves, pumps, etc.).

Furthermore, our pressure reducer is equipped with a compensation seat, thanks to which any pressure fluctuations upstream of the reducer do not occur downstream of the same.
